

Make a Skeleton

This is a skeleton we have in our museum. It is the skeleton of a Roman lady (The Romans lived over 2000 years ago). We all have a skeleton inside our bodies, grown ups have 206 bones inside their bodies. Babies though are born with 300 bones. The biggest bone in your body is in your leg and the smallest is in your ear!

Can you cut out and put Samantha skeleton together?
